Contacting CygNet Support	4

Installing CygNet

The following instructions are for a first-time installation. For information on upgrading your existing CygNet installation, refer to the **CygNet v9.5 Upgrade Procedure**.

"Source" refers to the software downloaded from the Weatherford website or the physical media (DVD).

Run Setup

Run **CygNetSCADAServicesSetup.exe**. This file can be found in the **Setup** folder on the source. Follow the steps in the **InstallShield** wizard and select the options applicable to your installation.

CygNet recommends that you choose a different physical drive for the backup directory in order to prevent total data loss in the event of a hardware failure.

Choose an applicable site name for the location where the service machine is installed. For larger multi-site systems, it is recommended that the site name be a name that users will easily recognize when browsing for data.

Install 64-bit Components

Support for a **64-bit UIS**, **64-bit device drivers**, and a **64-bit VHS** is now available. If you want to install 64-bit components, refer to the **CygNet v9.5 64-bit Installation Guide** (CygNet_95_64bit_Installation_Guide.pdf) for information about installing and configuring these services and drivers.

Install the License File

Copy your **CygNet.lic** file to the **CygNet\Services\ARS** folder within your chosen install directory. This file is provided via email. If you did not receive your license file, contact CygNet Sales via email at [CygNet Sales](#).

CygNet software will expire after a 3-day trial period if a valid license file is not installed. It is not necessary to stop CygNet to install the **CygNet.lic** file if it was started as a 3-day trial. Once the new file is copied to the **CygNet\Services\ARS** folder, the system will detect it within 5 to 10 minutes.

Activate the Host

The CygNet host requires activation. (Please note that activation is separate from licensing.) Host activation is a software key that must be obtained from CygNet Support. Contact CygNet Support at the [Software Support portal](#) (login required), via phone 1-866-4CYGNET (1-866-429-4638) or via email at [CygNet Support](#) for an activation key. Refer to the **Host Activation** chapter in the **CygNet Help** for instructions on activating the host.

The host will run in trial mode for 30 days. During this trial period the software is fully functional. Hosts will automatically shut down after 120 hours (5 days) when they fall out of activation compliance. Best practice recommends using the **Service Monitoring Service** (SVCMON) to monitor status and set up notifications.

Controlling Services

Use **CygNet Host Manager** to control (start and stop) the CygNet site services. Start **CygNet Host Manager** by double-clicking the desktop icon named **CygNet Host Manager**. Use the **Start** and **Stop** buttons to start and stop the site services.

Running Client Applications

Run the following client applications to administer your site.

CygNet Explorer

Once the services are running, you can start **CygNet Explorer** to view services and perform administrative functions.

- Click **Start > All Programs > CygNet > CygNet Explorer**.

CygNet Client Installer

Use the **CygNet Client Installer** to install other client applications.

- Click **Start > All Programs > CygNet > CygNet Client Installer**.

When prompted to select the BLOB service that will be used for updates, select SITE_NAME.APPS.

Patches

Patches are available for download on the [CygNet Download Site](#) (login required). A customer login is required to access these services. Please contact CygNet Support at the [Software Support portal](#) (login required), via phone 1-866-4CYGNET (1-866-429-4638) or via email at [CygNet Support](#) for a username and password.

Patches released before the date shown at the beginning of this document are already included in your software and do not need to be installed. Not every patch will necessarily affect your particular system. We recommend that you subscribe to the RSS feed on the Web site so that you are notified when new patches are posted.

More Information

For more information about what's new in this version of CygNet, refer to the **CygNet v9.5 Release Notes** document (CygNet_95_Release_Notes.pdf).

CygNet Documentation

The **CygNet Help** for CygNet v9.5 is available from <https://softwaredocs.weatherford.com/cygnets/95/>. Best viewed in Microsoft Edge or Google Chrome browser. Microsoft Internet Explorer 11 is not supported.

Contacting CygNet Support

Contact CygNet Support at the [Software Support portal](#) (login required), via phone 1-866-4CYGNET (1-866-429-4638) or via email at [CygNet Support](#).
